

Windows Repair Toolkit

Quick Start

1. Extract this ZIP file
2. Open the folder
3. Double-click: Run-Repair-Tool.cmd

That's it.

What This Does

- Repairs corrupted system files
- Fixes Windows Update issues
- Resets network stack (Internet problems)
- Cleans junk and temporary files
- Restarts critical Windows services
- Runs a full system repair (optional)

Important

- You WILL be prompted for Administrator access - this is required
- Some repairs may take several minutes to complete
- Do not close the window while a repair is running

When to Use This

Use this tool if your PC is running slow, acting weird, having update issues, having network or internet problems, or showing errors you don't understand.
